

Learning Log.

Entry one:

- This was written after DurHack but I accidentally put my api keys on the public repo so I ended up deleting the fork. So I have inserted it below.
- Initially what I tried to do?
 - Learnt google maps API
 - Making api call from the server
 - Working as a team
 - Delegating ideas skills
- What you have learned
 - I have learned how to manage my google API keys
 - I also learned how to call an API from a node js file using axios.
 - I also got a lot better at reading and understanding google API documentation.
 - One of the big things that I learnt was working as a team and how to delegate different tasks. Making it so that all our team can program at the same time.
- What I want to do now DurHack is over?
 - I want to make my own shortest path algorithm this is because in our 24 hours we just used one that we found online.
 - I also want to try and sort out the look and overall feel of the website.
- What are my next steps?
 - To start looking into different techniques are finding the shortest paths.
 - I also want to look and document what format the data would be passed to me and what sort of data I get. This is because I did not write the code that stores and gets the information from the database.

Entry two:
